

DIVEX

Manufacturers of Quality Diving Equipment

DIVER HARNESSES were previously time-consuming to dress and complicated. Such was the difficulty 'dressing-in' in confined spaces such as bells and donning the four required components of diver's recovery harness, tool harness, bail-out bottle harness and weight belt, that Divex was stimulated into designing 'one' easy-to-dress garment incorporating all of these features.

Divex achieved this in one well designed 'waistcoat-style' harness. The basic detailed design incorporated in the original Arvest is unlike any other, especially inferior copies. The strong base of the Arvest distributes the load across the body

The 'harness' arrangement will support a fully kitted diver securely and with comfort. The lower 'D' rings are well placed for tool or umbilical fastenings. The strap tails are neatly stored out of the way by the use of velcro - no annoying loose strap ends.

ARVEST HARNESS

Four harnesses in one

Tested and approved in accordance with PPE Directive (CE Certified)

Adopted by the Royal Navy as the standard harness for engineering divers

The diver may be recovered in the event of injury by attaching an appropriate recovery tackle to either of the shoulder mounted 'D' rings or via the 'D' ring located on the left and right chest/shoulder straps.

The original Arvest is fitted with a lace-up cylinder holder allowing fitment of cylinders with diameters ranging from 4" to 9". The sleeve-type holder also protects the cylinder from damage.

Alternatively, a Kam-Pac quick-release backpack is now available fitted to the Arvest (*please specify as shown over-leaf if required*).

The British Royal Navy adopted the Arvest as their standard harness as used by their engineering divers. Worldwide police diving teams and construction divers also choose to don the Arvest, as it frees them from the 'tangle' of multiple harnesses and back packs, increasing the safety and speed of response.

The through-crutch straps must not be removed if the harness is to remain safe and effective.

Arvest MK4 with weights being located in non-ditchable pockets

ARVEST MK4

This Arvest (also main pic previous page) is the original bell diver's harness with four non-ditchable weight pockets, each of the four holding up to 6lbs of lead. Two versions of cylinder holder are available. Pictures of both are shown below and are relevant to both the MK4 and MK5 harnesses.

ARVEST MK4 (LACE-UP CYLINDER HOLDER)

ORDER CODE DE394

ARVEST MK4 (WITH KAM PAC)

ORDER CODE DE394K

Arvest MK4 with lace-up cylinder holder

ARVEST MK5

This Arvest is suitable for surface diving as the weight pockets are readily released via two nylon-pull rods. A velcro retainer prevents accidental release during transport or pre-dive. Six pockets take up to 8lbs lead weight each.

Two versions of the cylinder holder are available. Pictures of both are shown above and below and are relevant to both the MK4 and MK5 harnesses.

Quick release activation of weights pockets

ARVEST MK5 (LACE-UP CYLINDER HOLDER)
